The ALLTUB GROUP is an integrated global aluminium packaging specialist producing aluminium tubes, laminate tubes, aluminium cans and aluminium cartridges.

With a global market share of over 10% (over 20% in Europe and North America)*, the Alltub Group is the worldwide leader in the manufacture and supply of collapsible aluminum tubes.

^{*}source: estimation based on the European Tube Manufacturers Association (ETMA) statistics.

ronmental formance

Company presentation

With **five production sites in Europe** and **one in Mexico** and a global sales network, ALLTUB GROUP is the perfect partner for customers requiring stylish, completely airtight and **100% recyclable packaging**.

Employing **1,300 people worldwide** and generating over 180 million Euros of annual sales, the ALLTUB GROUP has over 65 production lines manufacturing over 1.5 billion units per year.

All plants are certified ISO 9001 with additional certifications such as ISO 14001 (Alltub Central Europe s.r.o and Alltub France SAS), ISO 15378, ISO 50000 (Alltub Deutschland) and ISO 22000, BRC IoP, as well as Drug Master File registrations with the US FDA and Health Canada.

This EPD is based on primary data of Alltub Italia's site.

Company presentation: Range of products

Collapsible aluminium tubes are produced at ALLTUB's plants in Cividate (Italy), Kolin (Czech Republic), Saumur (France), Kirchheimbolanden (Germany) and Mexico City (Mexico).

Tube sizes range from 2ml up to 250ml fill volumes with a large variety of cap styles available.

ALLTUB's product data sheet provides comprehensive details of the tube sizes available, complete with corresponding thread designs/ dispensing mechanisms and in accordance with the cap type to be applied onto the tube.

The reference plant for this EPD, upon which data was submitted and analysed, is ALLTUB Italia (IT) and the concerned product is an unbranded aluminium tube* with dimensions 40 x 195mm and manufactured with primary aluminium.

* To define a tube as an unbranded one, it is enough to define its diameter, length and the kind of aluminium (primary or recycled). Other parameters are related to the customized customers tubes.

Company vision & values

ALLTUB GROUP is an **aluminium packaging** specialist, worldwide leader in **collapsible tubes**. The group provides sustainable solutions for customers in the pharmaceutical, cosmetic, food and industrial markets.

ALLTUB GROUP thrives to be the best partner in providing added value in **sustainable aluminium packaging solutions** both globally and locally, by relying on high quality standards and passionate employees.

ALLTUB GROUP has strong values:

- Respect
- Continuous improvement
- Walk the talk and be consistent
- Discipline
- Team-work
- Trust

Company vision & values: support for sustainable development

Alltub Group has set itself the rule of respecting the environment and promoting continuous improvement in environmental protection. Alltub Group is committed to sustainably upholding the goal of environmental protection for current and future generations*.

The next decade will be critical in terms of environmental challenges. Decisions should be taken to limit global temperatures rise, to ensure clean air and water, stable climate and safe food for tomorrow.

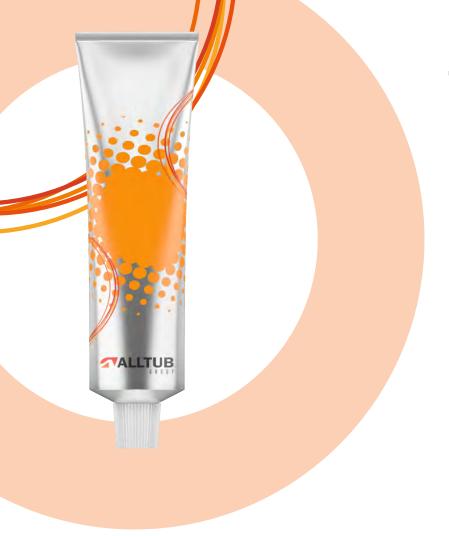

As implementing sustainable solutions is a key driver, ALLTUB GROUP is continuously working on finding better ways to make its operations and products more efficient and environmentally friendly. By respecting nature and its exhaustible resources, by strongly believing that recyclable and recycled aluminium is key for the future in the packaging industry.

ALLTUB GROUP continuously shapes the market, challenges the industry, supports changes and trends, brings innovations to the customers.

Alltub Group is proud to measure the environmental impact and performance of its products and communicate in a transparent way for consumers and employees. The main goal of this EPD is providing data for customers who would like to publish their own EPD with Alltub Group products.

This EPD has been approved by the ALLTUB Group's Management Team.

Product: aluminium tube general information

Thanks to their **incredible properties and characteristics**, aluminium tubes can be used in many different sectors for a wide range of products and applications, and are the perfect choice for a wide range of packaging styles from vintage to trendy packaging.

Aluminium is a **permanent material** and can be **recycled indefinitely**.

Recycling or recycled contents is more than a trend it's a company commitment, especially today.

(Re)turning to aluminium is a **pertinent solution** for many brands and producers. Before the rise of plastics, most toothpastes, creams and ointments were packed in aluminium tubes. **Lightweight and malleable**, aluminium is popular with designers, and its natural, authentic image chimes with the current consumer climate.

Product: aluminium tube general information

The collapsible aluminium tube is a tried and tested packing solution which has existed for many decades across all continents of the world.

The first squeezable metal tube was born in 1841 in America for paint. Beginning in 1886, attempts were made to fill aluminium tubes with contents other than paint such as toothpaste in 1887. The first attempts to use aluminium for the industrial production of tubes came in 1913. The first year with a high production rate was 1920, and thereafter the number rose greatly during the 1920s and 30s. In 1939, the aluminium tube celebrated its victory over the other materials used up until then.

After more than 175 years ago of history as a material for high-quality packaging, the aluminium tube is still a success story.

All industries today, whether they produce pharmaceuticals, cosmetics, paint or pasty chemicals for technical use, rely on the aluminium tube as the premium packaging for their precious products, and they will continue to do so in the future*.

Product: aluminium tube general information

The key characteristics of the aluminium tube which have made it so popular over the years and with ever increasing popularity are the following:

- The typical characteristics of the material guarantee excellent resistance to the ingress of both air and light, preserving over time all the characteristics of the tube's content. Aluminium tubes can also be sterilized by autoclave or gamma radiation for example.
- The wide possibilities of forming the aluminium allow the creation of innovative dispensing systems, increasing the user experience of the tube as well as increasing the shelf life of the content.
- Reducing waste and saving food: using just the amount of product we need.
- Tubes are lightweight and can be customized whilst maintaining their recyclability in full after use.
- Custom printing with a wide variety of beautiful multi-colour print options.

Content declaration: regulatory compliance

The composition of the analyzed aluminium tube is: Aluminium 79%, Polymeric Coatings 11%, PP 10%.

The ALLTUB Group is a downstream user and manufacturer of articles, the collapsible aluminium tubes for the food, cosmetics, pharmaceutical and industrial market, in the meaning of the European chemical legislation REACH(Regulation (No 1907/2006 of the European Parliament and of the Council on the Registration, Evaluation, Authorisation and Restriction of Chemicals).

We exclusively process at our European sites raw materials, which comply with the REACH Regulation including the CLP Regulation (EC) No 1272/2008 (labelling and packaging of substances and mixtures), and we fulfil all REACH obligations as applicable to packaging manufacturers. The CLP Regulation, based on the Globally Harmonized System GHS, does not apply to articles like aluminium collapsible tubes.

The ALLTUB Group strongly avoids using raw materials containing more than 0,1% by weight of Substances of Very High Concern SVHC published to the Candidate List for Authorisation according to Article 59(10) of REACH. However, we will fulfil the REACH obligations to submit relevant data to ECHA via the SCIP database and will inform our customers, if different.

ALLTUB's collapsible aluminium tubes comply with the following EU legislations:

- Packaging and Packaging Waste Directive 94 62 /EC PPWD and its amendments concerning the defined limits for heavy metals (Sum of Cd, Cr, Hg and Pb < 100 ppm)
- Regulation (2019 1021 on persistent organic pollutants and its amendments concerning the restrictions on listed substances
- Regulation (No 1005 2009 on substances that deplete the ozone layer and itsamendments concerning therestrictions on listed substances
- ALLTUB's collapsible aluminium tubes don't contain VOCs, exempt technically unavoidable and negligible residuals of organic solvents at ppm levels, nor intentionally added phthalates.

Basically, all ALLTUB tubes for food, cosmetic, pharmaceutical and industrial applications are developed with raw materials compliant to the EU Framework Regulation (EC) No. 1935/2004 on materials and articles intended to come into contact with food and Regulation (EC) No. 2023/2006 on good manufacturing practice for materials and articles intended to come into contact with food.

Furthermore, requirements applying to specific groups of materials are or can be fulfilled as following:

Virgin + PCR Aluminium:

EN 602

CoE Resolution CM/Res(2013)9 on metals and alloys used in food contact materials and articles.

Plastic Materials:

Regulation (EU) No. 10/2011 on plastic materials and articles intended to come into contact with food.

European Pharmacopeia monographs 3.1.3 (Polyolefins) and 3.1.5 (Polyethylene with additives for containers for parenteral preparations and for ophthalmic preparations) or 3.1.6 (Polypropylene for containers and closures for parenteral and ophthalmic preparations.

Colorants:

CoE Resolution AP (89) 1 on the use of colorants in plastic materials coming into contact with food.

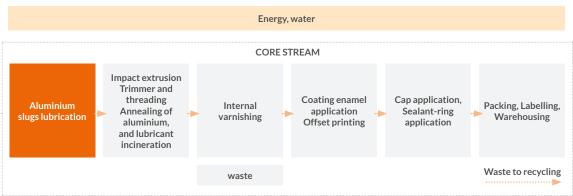

Content leclaration

LCA Methodology

Additional information & references

Aluminium slugs lubrication: During the first phase of the core process, aluminium' slugs are lubricated into tumbling machines adding solid lubricant. This process facilitate the next production phase of impact extrusion. The lubricant is subsequently completely removed by sublimation into the annealing oven.

Product & Process

Content declaration

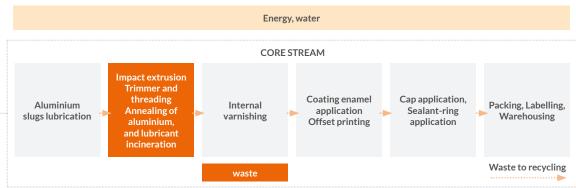

LCA Methodology

nvironmental A performance

Additional information & references

Impact extrusion: The slug is positioned in the die and hit by a mandrel; the aluminium, compressed between the mandrel and the matrix, forms the shoulder shape and flows back along the surface of the mandrel creating the cylind ical shape.

Dimensional and threading operation: The trimming machine removes the surplus to obtain the nominal tube length and it machines the thread on the nozzle. The aluminium scraps generated by these operations are eliminated and collected for recycling.

Annealing of aluminium: To give to the trimmed tube the requested mechanical properties and remove any residue of the lubricant, the tubes have to come into an annealing oven at a temperature above 300°C.

Product &

Content declaration

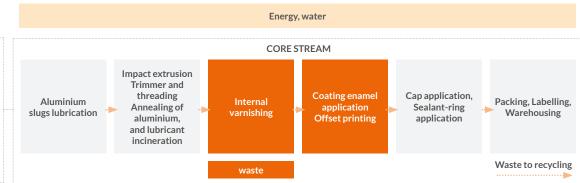

LCA Methodology

Environmental performance

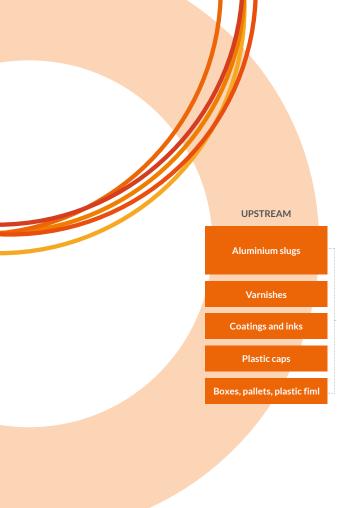

Additional information & references

Internal varnishing: At the exit of the annealing oven the tube is coated internally by spraying with 2 or 3 passes. This is necessary to ensure the protection of aluminum to the chemical product contained therein. During the passage through the curing oven, generally at 280-300°C, the internal coating cures and becomes solid and homogeneous. The complete protection of the aluminum must be guaranteed by the thickness, the temperature of polymerization, fl xibility and uniformity of the internal film

Printing: The first phase of the printing process is the application of the enamel which consists of applying a coating on the external surface of the tube with a roller. The enamel can be transparent, white or colored, glossy or matt. The next step in the drying oven at a temperature between 120 and 140°C allows the partially cured enamel to improve the adhesion of the printing inks. The printing technology is indirect offset wet on wet. The ink, through a series of rubber and metal rollers, is uniformly distributed and transferred to the photopolymer plate. Then the colour is transferred, one by one, without drying, onto a printing blanket. The complete image is transferred from the blanket onto the tube. The enamel and inks are completely dry after passing in the curing oven at a temperature of 170°C.

Content claration

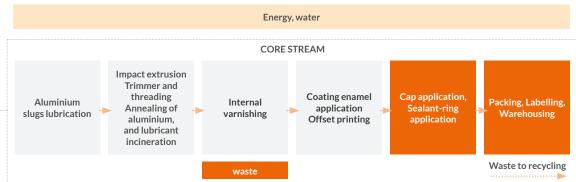

LCA Methodology

vironmental Addi erformance

Finishing: This phase consists into three operations:

- Plastic Cap application;
- Sealant-ring application near the open end of the tube;
- Packing and positioning of the tubes into boxes and then onto pallets, wrapped with stretch plastic film, suitable for t ansport and shipping.

LCA Environmental Additional inf Methodology performance & referen

LCA Methodology: other information

Geographical scope of the EPD: Global

Decleared unit: One aluminium tube with a plastic cap, at gate. The data reported relate to a product not yet on the market divided into the raw material supply (upstream processes) and the production phase, including cap application (core processes). The prevalent cap for the declared tubes is intended as standard and used for impact assessment.

Declaration of the year(s) covered by the data used for the LCA calculation: year 2022

Main database for generic data: Ecoinvent 3.9.1

LCA Software: Simapro 9.5

System boundary: "cradle to gate"

Cut-off rules: Data for elementary flows to and from the product system contributing to a minimum of 99% of the declared environmental impacts are included (not including processes that are explicitly outside the system boundary as described in Section 4.3 of the PCR).

Excluded processes: Production and transport of inks, production of rollers' rubber, transport of plastic cap, transport of aluminium ingot to slugs' production facility were excluded because under the cut-off.

LCA modeling description: Product environmental performance was assessed using the Life Cycle Assessment (LCA) method, from the extraction of the raw materials to the production of the finished product. The study was conducted in accordance with the ISO 14040 standard and the product category rules set forth in PCR 2019:13 Packaging (1.1), approved by the International EPD® System technical committee.

Data Quality: The data quality rules followed for this EPD are those defined in the relevant PCR. In accordance with such rules, both specific data gathered directly from the Aluminium Tubes production site during the year 2022 and generic data extracted from the commercial database (Ecoinvent 3.9.1) were used.

Additional information

Aluminium is a permanent material and can be recycled infinitely.

Aluminium packaging preserves more resources than it uses itself avoiding spoilage and product losses.

75% of the aluminium ever produced is still in use.

Recycling saves 95% of the energy required to produce primary aluminium.

Aluminium is the third most abundant element present on earth and Bauxite, the raw material for aluminium production, is widely available with known resources for more than 200 years.

Aluminium is multi-functional packaging material for utmost product protection, safety, convenience and resource efficiency.

Aluminium enjoys high recycling rates, for example a rate of 60% for packaging in Europe.

Aluminium is recycled in a closed material loop and is widely used in new applications.

Continuous weight reduction of aluminium packaging has been achieved without compromising functionality and performance.

Aluminium has the highest scrap value of all packaging materials.

ALLTUB GROUP Latest Awards

The World Packaging Organisation (WPO) has chosen **ALLTUB** as a **WorldStar 2024 winner** (category packaging materials and components) for the POREfessional tube produced by ALLTUB France for Benefit Cosmetics.

The key features of the tube are production using >95% PCR aluminium, the beautiful, brushed mat aluminium print finish, combined with a major global brand such as Benefit Cosmetics reverting back to using aluminium tubes.

The WorldStar awards are the Champions League of packaging awards. You can only enter the competition if you have already won an industry award in your local country/continent. ALLTUB France won the **ETMA 2023 aluminium tube of the year** competition with the POREfessional tube, thus giving us access to enter the WorldStar awards.

The WorldStar judging process was conducted over two rounds and the judging panel was composed of 44 international esteemed judges, representing 45 WPO countries members from all around the world.

Additional information

Aluminium is everywhere

Aluminium is the third most abundant element in the Earth's crust: it accounts for as much as 8%, with oxygen accounting for 46% and silicon 28%. It means aluminium is the most abundant metal.

The source of aluminium is bauxite, which through the Bayer process is converted into alumina. In turn the alumina is converted into aluminium through electrolysis.

65 million tonnes* of primary aluminium are produced every year. In addition, more than 30 million tonnes** of recycled aluminium are produced from melted down aluminium scraps. The trend is upwards because the global demand for aluminium is increasing, the green tube is a perfect example of this trend!

Almost 75 per cent of the 1.5 billion tonnes of Aluminium ever produced is still in use today***.
